EXPERIENCE

Relativity, Chicago — *Service Delivery*

Oct 2020 - Nov 2022

- ➢ Create solutions to increase migration performance.
  - ○ This includes using powershell and sql to automate backend processes.
  - ○ Created a solution which allows multiple instances of our app to run. Each running instance has its own queue of jobs and each job is cleaned up once complete and a report generated.
  - ○ My solution increased performance 1000%+ going from 200 GB migrated a day per account to 2.4 TB migrated a day per account.
- ➢ Lead teams in educating how to increase performance for our data migration solutions.

VerQu, New Jersey— *Data Migration Engineer*

Feb 2018 - Oct 2020

- ➢ Install migration software in client environments developed by our software team.
- ➢ Responsible for migrating client data and providing daily/weekly updates at client and team meetings.
- ➢ Generate reports using MSSQL then compiling this data into a digestible Excel or PowerBi report.
- ➢ Report bugs and work with the dev team via Slack/Jira to solve issues in our software.

PROJECTS

CodeFork

www.codefork.dev

- ➢ Web app using React and Next.js.
- ➢ Users can document their GitHub repos within the same app they are viewing their code.
- ➢ CodeFork can host your documentation for you and allow users to review your docs and leave comments.
- ➢ With realtime chat features members of your team can easily collaborate while creating documentation as well as outside users being able to chat with other viewers of your docs.
